Addendums:

1. GWVR (Gross Vehicle Weight Rating) is the maximum permissible weight of this fully loaded motorhome. The GWVR is equal to or greater than the sum of the UVW (unladen vehicle weight plus the OCCC (occupant cargo-carrying capacity)

2. GAWR (Gross Axle Weight Rating) is the maximum permissible loaded weight of each axle as designed to carry.

3. GCWR (Gross Combined Weight Rating) is the value specified by the motorhome manufacturer as the maximum allowable loaded weight of the motorhome with its own weight and with fully loaded vehicles. Refer to Holiday Rambler and chassis manufacturer’s manuals for complete information.

4. Length measured from front bumper to rear bumper (includes overhang).

5. Excludes safety equipment and accessories.

6. Motorhomes feature a body width over 96” which will restrict your access to certain roads. Before purchasing, you should research any state and/ or province road laws which may affect your usage.

7. Tank manufacturer’s listed water capacity (WC). Actual propane capacity is 80% of tank rating as specified by the safety code.

8. The chassis manufacturer recommends the installation of a supplemental brake control system to activate the brakes on the vehicle or trailer you are towing. Hitch receiver ratings expressed are maximum for the hitch receiver installed and may require the purchase of additional equipment that is dependent on the weight of the towed load. Consult with hitch receiver manufacturer for further information.

9. UVW and OCCC are found on the label containing the federal certification tag in each RV.

10. The Minimum Towable Load of this vehicle is the available weight capacity up to GCWR, when the coach is fully loaded to maximum GVWR. However, if the coach is loaded to something less than maximum GVWR, that extra available weight capacity can be added to your Towable Load. For example, if your coach is loaded to 1000lbs less than maximum GVWR, your Towable Load increases accordingly. Do not exceed the hitch rating weight, GCWR or GVWR.
